Machine Upgrade No. **E-001 (E377)**

Upgrade Benefits

Advantages:

- Latest production standard.
- Easier to setup.
- Less requirements for re-calibration and adjustment.
- Reduced cycle interruptions due to Coolpik Photoeye interference.

Includes:

- Photoelectric sensor emitters.
- Photoelectric sensor receivers.
- Multiport board.
- Cable assemblies.
- New photo-eye mounting plates and supporting hardware.

Installation Instructions

The installation should be performed by a Husky Service Engineer because it requires a specialized knowledge and specific tool kit. Approx installation time (2 days).

To request a quotation for this upgrade please contact your local CSM Business Manager, or or click on the email address below and reference the serial number of the machine(s) and this machine Upgrade No.
