HUSKY®

Machine Upgrades

🛠️ Critical Signal Interface Upgrade

Enhance Control. Improve Quality. Reduce Scrap.

✅ What It Does

Adds a **dedicated HMI screen** that lets users monitor and react to critical input signals from auxiliary devices or factory systems.

⚙️ Key Features

- **Customizable Inputs** (name each, up to 35 characters)
- **Two Fault Reactions:**
    - **Warning Only** – On-screen alert, no machine stop
    - **Stop at End of Cycle** – Halts after current cycle, resumes only when signal is normal
- **Reaction Delay**: Ignore input for up to **99 cycles** during startup
- **Secure Access**: Only **Admin-level** users can modify settings
- **Easy Integration**: 10-pin surface-mount connector near HMI, **mating connector included**

🌟 Benefits

- Prevents scrap by catching device or system faults early
- Supports smarter, safer, more consistent production
- Integrates seamlessly with existing machine logic

🔧 Includes

- HMI interface with configurable logic
- Signal connector kit (10-pin + mating plug)
- Software with admin-level settings control

📌 **Customer Responsibility**: Coordinate with third-party device suppliers for signal outputs.
